

EBRD and commitment to the environment

The European Bank for Reconstruction and Development is committed to promoting environmentally sound and sustainable development in the full range of its investment activities. The EBRD seeks to ensure that the projects it finances:

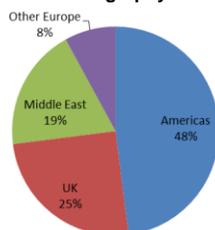

- Are socially and environmentally sustainable;
- Respect the rights of affected workers and communities; and
- Are designed and operated in compliance with applicable regulatory requirements and good international practices.

EBRD green bonds

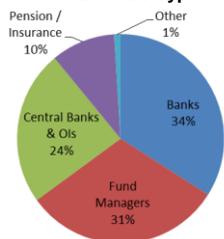

Since December 2010 EBRD issued 62 “**Environmental Sustainability Bonds**”, denominated in Australian Dollar, Brazilian Real, Indonesian Rupiah, Indian Rupee, New Zealand Dollar, Russian Rouble, Turkish Lira and US Dollar for a total of €1.74 billion equivalent (as of 31 December 2016). The bonds represent an opportunity to invest in environmental and sustainable solutions through a triple-A security that supports state and private sector environmental businesses in EBRD’s countries of operations. The proceeds of the bonds are specifically earmarked to support a portfolio of “green” projects. The EBRD also seeks to ensure that the bond proceeds can be directed in full to its Green Project Portfolio by limiting the total amount of environmental sustainability bonds outstanding to 70 per cent of the Green Project Portfolio.

In July 2016 the Bank issued USD 650 million 0.875% public listed bond due 22 July 2019, aimed specifically at institutional investors seeking to support environmentally sustainable projects.

Investor Type

How we set the criteria for the Green Project Portfolio

EBRD’s Environment and Sustainability Department established the criteria for the use of proceeds on EBRD’s “green” bonds with reference to widely accepted “green” investment principles.

EBRD’s Environmental specialists review our committed projects and establish a subset that is consistent with these criteria (the Green Project Portfolio). **The only projects included are those where the entire, or substantially the entire amounts disbursed are directed at environmental goals.**

The EBRD’s Green Project Portfolio comprises investments in the following areas: energy efficiency, clean energy, water management, waste management, as well as pollution prevention and sustainable transport.

At 31 December 2016, EBRD’s Green Project Portfolio (GPP) comprised 352 projects, totaling €6.1 billion, of which €3.9 billion was drawn down. The average tenor of the projects was 11.9 years and the average remaining life was 9.1 years.

The projects in the portfolio include, without limitation, the financing of:

- Renewable energy projects, such as
 - photovoltaic installations, and production of photovoltaic cells/modules,
 - installation of wind turbines,
 - construction of small hydro power plants and mini-hydro cascades,
 - geothermal and biomass energy facilities
- Rehabilitation of transmission/distribution facilities to reduce total greenhouse gas (“GHG”) emissions and allow for increased integration of renewable electricity in the grid, , e.g. smart distribution networks
- Modernisation of industrial installations to reduce total GHG emissions and other pollution
- New technologies that result in significant reductions in total GHG emissions
- Greater efficiency in mass transportation, such as investment in fuel-efficiency (fleet replacement) or more energy efficient infrastructure
- Methane capture on waste landfills and waste water treatment plants
- Rehabilitation of municipal water/waste water infrastructure to improve drinking water quality and wastewater treatment and reduce water consumption and waste water discharges
- Improvements to solid waste management (minimisation, collection, recovery, treatment, recycling, storage and disposal)
- Energy efficiency investments in existing buildings (insulation, lighting, heating/cooling systems)
- Investments to improve efficiency of industrial water use
- Sustainable and stress-resilient agriculture, including investments in water-efficient irrigation
- Sustainable forest management, reforestation, watershed management, and the prevention of deforestation and soil erosion.

Projects involving the following activities are not eligible for inclusion in the Green Project Portfolio:

- Fossil fuel production and projects with significant consumption of fossil fuels (coal, heating oil, oil shale)
- Projects requiring a derogation from the Environmental and Social Policy for not being able to meet the Bank’s environmental and social Performance Requirements within the term of the EBRD transaction

EBRD does not finance any projects in sectors listed below:

- Activities listed on the Exclusion list in Annex 1 of EBRD’s Environmental and Social Policy
- Construction of new large hydropower installations (as defined by International Commission on Large Dams (ICOLD))
- Nuclear energy generation
- Biofuel production (pending the adoption of internationally recognised sustainability criteria)
- Alcohol production, defense-related activities, tobacco industry, stand-alone gambling facilities (*)

About EBRD

- Established in 1991
- Owned by 66 countries and the EU and the EIB
- AAA/Aaa/AAA (all stable) rating by S&P/Moody’s/Fitch
- Investing in more than 40 countries from central Europe to central Asia and SEMED
- €27.6 billion operating assets at cost (1,842 active projects) as at YE16
- €29.7 billion subscribed capital plus reserves and retained earnings of €9.2bn (YE16)
- Headquartered in London, UK, with more than 40 regional offices.
- YE16 net profit of €1 billion (FY 2015: €0.8 billion)
- 0% risk weighted (Basel II), Global MTN programme, SEC exempt

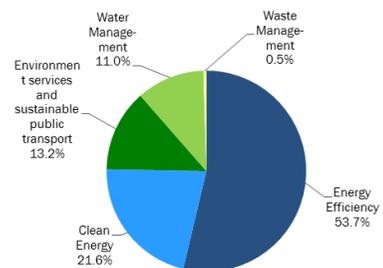

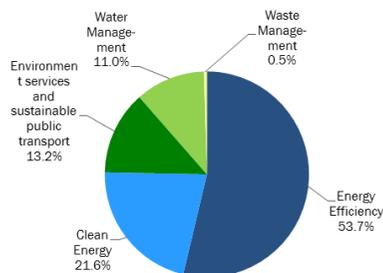

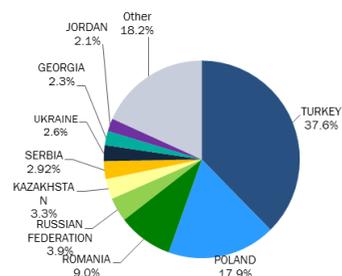

In June 2011 EBRD signed a 20-year €151 million loan to improve energy efficiency in Russian Railways.

Green Project Portfolio (at 31 December 2016)

- €6.1bn committed amounts
- €3.9bn operating assets
- 352 projects
- 11.9 years weighted average tenor
- 9.1 years weighted average remaining life

Operating Assets by Region, Industry and Class

Clean seawater for southern Turkish city

Borrower: Mersin Wastewater Project, City of Mersin, Turkey
Facility: €20 million loan, and technical assistance
Signed: 18 June 2012
Tenor: 15 years

The southern city of Mersin, with population one million, is a major commercial shipping centre where leisure boats are still a new sight; it is better known for its industrial zones than tourism, despite sharing the Mediterranean coast with the nearby resort of Antalya. But the city does want an attractive beach for its citizens and soon it will have one.

Until a few years ago, Mersin had no choice but to dump its wastewater into the sea. Today, it treats 80 per cent of its own wastewater in a newly-built facility and recently started construction of an EBRD-financed wastewater treatment plant which will take care of the remaining 20 per cent. Once the EBRD-financed facility is operational, the city can build a beach, which contributes to tourism industry of the city and the region.

Improving energy efficiency in paper production

Borrower: Metsä Tissue Oyj, Poland and Russia
Facility: €25 million loan (Poland) and €10 million loan (Russia)
Signed: 28 August 2012
Tenor: 8 years

Metsä Tissue projects will upgrade existing mills and provide brand-new ultra energy-efficient equipment setting up new standards not only for the pulp and paper sector in Poland and Russia, but also for all other paper companies in Europe. The company plans to replace the old and inefficient paper machines; close down the existing coal plant and install two new natural gas boilers to meet the heating requirements, reducing CO2 emissions by 35,000 tonnes per year. The gas turbines will have negligible air emissions of sulphur oxides and dust and meet European Union emission standards. The new tissue paper machines' energy consumption will be below European Union Best Available Techniques (BAT) resulting in significant energy savings and further CO2 reduction.

The project will increase the utilization of recycled paper, which has positive effect on the waste management. As a result significant Energy Efficiency and environmental benefits (lower CO2/SO2 emissions, water and wood consumption under EU BAT) will be realized.

Almaty Bus Sector Reform Project

Borrower: Almatyelectrotrans, a municipal urban transport company operating trams, trolleybuses and CNG buses in Almaty, Kazakhstan
Facility: USD39.3 million loan
Signed: 30 January 2013
Tenor: 10 years

The Loan proceeds will be used to procure up to 200 new compressed natural gas ("CNG") buses. The Project is a complementary follow-on transaction to the existing Almaty Bus Sector Reform project which was signed in 2010. Project's success will be monitored through (a)

Implementation of the operational plan (i.e. delivery of the vehicle kilometres ordered by the City under the Public Service Contract) on annual basis by at least 95 per cent; and (b) reduction of CO2 emissions by 60 tonnes p.a. in public transport sector. Ninety per cent of all existing buses in the city are classified at EURO-0 or EURO-1, whereas the new CNG units will be EURO-4 or better.

Construction of the first wind farm in Mongolia

Borrower: Clean Energy LLC, Salkhit Wind Park, Mongolia
Facility: USD 45 million loan
Signed: 21 March 2012
Tenor: 15 years

Mongolia is a record-breaker in many ways: due to its mining boom, the country is one of the fastest growing economies globally. Its main city Ulaanbaatar also comes in first as coldest capital in the world. And with energy needed for companies and to keep citizens warm, it doesn't come as a surprise that the city is also one of the most polluted capitals in the world. While the country has so far almost exclusively relied on old coal-fired plants for its energy supply, Mongolia's Salkhit wind farm is expected to produce up to five per cent of the country's electricity demand.

This is the first wind farm in Mongolia and it is expected to be operational this summer and will reduce carbon emissions by approximately 164,000 tonnes annually – an amount equivalent to the emissions of about 30,000 passenger cars – while producing up to 5 per cent of the country's electric demand.

An EBRD landmark deal, the Salkhit wind farm in Mongolia, was named Asia-Pacific Renewable Deal of the Year by Project Finance Magazine in March 2013.
